DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 4-7 and 10-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Frisbee '268. Frisbee discloses a plow vehicle (generally 20) having a frame (area of reference numeral 28), a plow 26, a lifting cylinder 32 pivotally connected (via 34) to the plow, a rolling cylinder 44 pivotally connected to the plow (at 46) and a bracket (as seen in figure 1, area of reference numeral 38) pivotally connected to the frame (via 36) wherein the lifting cylinder is fixedly connected to the bracket (as seen in figure 1) and the rolling cylinder is pivotally connected to the bracket (via pin 48).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 3671

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2, 3, 8, 9, 13 and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Frisbee '891 in view of Ranner '891. Frisbee discloses the claimed device substantially as discussed above but fails the use of a rigid arm between the frame and plow. However, Ranner teaches that it is well known to employ such a rigid arm (as seen in figure 1). Also, Ranner shows the rigid arm pivotally extending from the frame (via pin 2) and being pivotally connected to a plow (at 7). Further, Ranner shows the arm being pivotally connected to the lifting cylinder (at pin through bracket portion 3). It would have been obvious to one having ordinary skill in the art to provide the device of Frisbee with the teachings of Ranner in order to provide a plow vehicle having greater stability and thus greater operational range and effectiveness.
